

Big Bluestem

Andropogon gerardii

Characteristics

Mature Height (inches)	72—96 inches
Cool / Warm Season:	Warm
Growth Habit:	Bunch/Sod
Introduced / Native:	Native
Seeds Per Pound:	145,000
Seeding Rate (PLS #/Ac)	5—8
Germination (days):	14-21
Soil Types:	Mesic
Indicator Region (ZONE 3,5)	FAC-
% of Mixture	5-50%
Drought Tolerance:	High
pH	6—7.0
Feed Quality:	Excellent

Big Bluestem can be used for erosion control in highly erodible areas and provides excellent food and cover for livestock and wildlife. It is a vital component in any native mixture used for conservation, pasture land and erosion control. Prefers full sun, is very drought tolerant and has a moderate tolerance to salt.
