

# Fairway Overseeder

## Ryegrass/Bluegrass Mix

### Description

**Fairway Overseeder** is formulated to over-seed fairways where perennial ryegrass is the main species. The rhizomatous root growth of the bluegrasses will build a strong base for the perennial ryegrass to thrive. This Mixture tolerates mowing heights of down to 1/2 inch. **Fairway Overseeder** is an excellent choice for golf course fairways but can also be used on home lawns, parks, athletic fields and cemeteries.

### Contains:

90% 5-Iron Ryegrass Blend and 10% Sure Shot Kentucky Bluegrass

### Applications for Use:

Golf Courses, Athletic Fields, Parks and Cemeteries

### Seeding Rate:

New Seeding (bare ground): 7 LBS per 1,000 SQ FT  
 Over-Seeding (into existing): 3.5 LBS per 1,000 SQ FT  
 Over-Seeding (heavy use): 10 LBS per 1,000 SQ FT

### Seeding Dates:

March-May  
 August- October  
 December-February (dormant seeding)

### Days to Germinate:

Perennial Ryegrass- 4-7 Days  
 Bluegrass- 10-21 Days

### Characteristics

**Color:** Excellent  
**Density:** Excellent  
**Shade Tolerance:** Good  
**Drought Tolerance:** Good  
**Wear Tolerance:** Excellent  
**Mowing Height:** Down to 1/2 inch cut  
**Leaf Texture:** Fine  
**Rate of Establishment:** Excellent

# General Seeding Guidelines

## I. SEEDING DATES

April 15 to June 15

August 10 to October 15

November 15 to February 15

## II. SITE PREPARATION FOR BAREGROUND SEEDING

- i. Conduct a soil test, per acre, to determine any needed soil amendments
- ii. Check soil PH. Ideal PH is between 6.0 and 7.0
- iii. Eliminate existing vegetation
- iv. Spray with a non-selective herbicide
- v. Remove any dead vegetation
- vi. Add soil amendments. Adjust PH.
- vii. Till soil to a 4-6 inch depth
- viii. Remove any large debris
- ix. Pulverize and lightly roll soil
- x. Apply 1 lb of Phosphorous (P) (2.27 lbs P<sub>2</sub>O<sub>5</sub>) / 1000 ft<sup>2</sup> to soil surface

## III. SITE PREPARATION FOR INTERSEEDING/OVERSEEDING

- i. Conduct one soil test, per acre, to determine any need soil amendments
- ii. Check soil PH. Ideal PH is between 6.0 and 7.0
- iii. Remove any debris that may inhibit seeding
- iv. Mow area to be seeded if existing vegetation is higher than 3-4 inches

## IV. SEEDING METHODS

Seeding Method is base on the slope and soil at site. Use broadcast, drop, slit or drill seeding methods where erosion is not a concern.

- i. Seed should be planted .125 to .25 inches below soil surface
- ii. Plant two directions putting 1/2 of seed down each direction
- iii. Gently roll or rake seeded area to ensure good soil to seed contact
- iii. If inter-seeding into existing vegetation use a slicer/inter-seeder that cuts into existing vegetation and places the seed into the soil at an optimum depth of 1/4 to 1/2 inch and achieves good soil to seed contact
- iv. If broadcast seeding into existing vegetation drag a harrow or chain link fence over seeded area to ensure seed to soil contact.

Hydro seed steep slopes or areas where erosion is a concern..

- i. Broadcast 1/2 of the seed before hydro-seed mixture is applied
- ii. Place the other 1/2 in the hydro seed mixture

## V. WATERING REQUIREMENTS

- i. Water to field capacity immediately after seeding
- ii. The first three weeks after seeding keep top 1.t inches of soil moist
- iii. Weeks four through six after seeding water 3-4 times per week
- iv. After six weeks water when grass begins to show drought stress

## VI. FERTILIZATION AND MOWING

- i. Fertilize seeded area once for the first two months with .5 lbs of N / 1000ft<sup>2</sup> after seeding
- ii. Mow when the grass is one inch longer than desired height. Do not remove more than 1/3 of grass blade.
