

Turf Type Tall Fescue/Kentucky Bluegrass: 90% [Firecracker LS](#), [Spyder LS](#), [Firenza](#) and [Mustang 4](#) Turf Type Tall Fescue, 10% Nu Blue and [Everest](#) Kentucky Bluegrass

Characteristics

- Superior ratings from the [National Turf Evaluation Program](#)
- Extremely wear tolerant once established
- Excellent low growing dwarf characteristics
- Superior low maintenance performance
- Good disease resistance
- Adapted to a wide range of turf uses
- Blue Chip Plus and Everest Kentucky Bluegrasses provide a better knitted turf
- [Lateral Spread Technology LS™](#) provides greater potential stand density, particularly under stress and self recuperation from traffic, thinning or injury

Seeding Information

Seeding Rates:

New Seeding: 10 Lbs per 1,000 Sq. Ft.
 Over-seeding: 5 Lbs per 1,000 Sq. Ft.
 Over-seeding High Use Areas: 12 Lbs per 1,000 Sq. Ft. at weekly/monthly intervals as needed

Seeding Dates: March – May, August – October
Dormant Seeding: December – March

Germination Times: Fescues – 5-7 Days Bluegrasses – 10-21 Days

Uses

Super Turf II LS Sod Grower is a mixture of the very best of the new lower growing (dwarf) turf type tall fescues. Varieties selected score at the very top in the NTEP trials for turf quality, wear tolerance, low maintenance performance, leaf texture, endophyte enhancement and disease resistance, especially brown patch. Blue Chip Plus and Everest are unique types of Kentucky Bluegrasses, which provides the knitting effect of the Kty. Bluegrass rhizomes but are non aggressive and will not compete with the tall fescue. *Super Turf II LS Sod Grower* can be used in all aspects of the turf industry. Generally recommended in areas where supplemental water is available, although *Super Turf II LS Sod Grower* will adapt well to low maintenance areas.

This certified blue tag is your guarantee of variety and quality

General Seeding Guidelines

A. SEED TIMING

- a. Seed from April 15 to June 15 or
- b. August 10 to October 15
- c. Dormant seeding after November 15 will germinate the following Spring

B. SITE PREPARATION

- a. Conduct soil test to determine soil additives needed
- b. Ensure soil pH is between 6.0 and 7.0
- c. Eliminate existing vegetation
 - i. Spray with non-selective herbicide
 - ii. Remove dead vegetation through mechanical means
- d. Add recommended soil amendments, pH adjustment materials, and fertilizer
- e. Till soil to a 4-6 inch depth
- f. Remove rocks and debris larger than one inch diameter
- g. Pulverize and lightly roll soil
- h. Apply 1 lb phosphorous (P) (2.27 lbs P₂O₅) / 1000 ft² to soil surface

C. SEEDING METHOD

- a. Seeding method is based on slope and soil at site
- b. Broadcast-, drop-, slit-, or drill-seed flat areas where erosion is not a concern
 - i. Seed should be planted 0.125 to 0.25 inches below soil surface
 - ii. Plant two directions putting ½ of seed down each direction
 - iii. Gently roll or rake seeded area to ensure good soil-to-seed contact
- c. Hydro-seed steep slopes where erosion is a concern
 - i. When hydro-seeding, broadcast ½ of the seed before hydro-seed mixture is applied and place ½ of the seed in hydro-seed mixture

D. WATERING REQUIREMENTS

- a. Water to field capacity immediately after seeding
 - b. The first three weeks after seeding. keep top 1.5 inches of soil moist*
 - c. Weeks four through six after seeding, water 3-4 times per week
 - d. After six weeks water when grass begins to show draught stress
- *Number of times to water per day depends on temperature, humidity, wind, and rainfall

E. FERTILIZING & MOWING

- a. Fertilize seeded area with 0.5 lbs nitrogen (N) / 1000 ft² 1, 2, and 3 months after initial seeding, then begin a regular fertilizer schedule
- b. Mow when grass is one inch longer than desired grass height but do not remove more than 1/3 of grass blade (i.e. mow when grass is 4 inches tall if desired height is 3 inches)
