

SURE SHOT™ Kentucky Bluegrass Blend

Varieties: 4-Season, [Everglade](#), Rush, [Nu Destiny](#) and [Solar Eclipse](#) Kentucky Bluegrasses

Characteristics

- Rich, dark green color
- Superior disease resistance
- Reduced nitrogen requirements
- Vigorous rhizome development
- Tolerant to 1/2" to 5/8" mowing height
- High density at fairway mowing heights

Seeding Information

Seeding Rates:

New Seeding: 3 Lbs per 1,000 Sq. Ft.

Over-seeding: 1.5 Lbs per 1,000 Sq. Ft.

Over-seeding High Use Areas: 4 Lbs per 1,000 Sq. Ft. at weekly/monthly intervals as needed

Seeding Dates: March – May, August – October Dormant Seeding: December – March

Germination Times: 10-21 Days

Uses

Sure Shot incorporates the very latest of a new generation of Kentucky Bluegrass varieties that will tolerate mowing heights as low as 1/2" and still maintain a uniform density. All varieties ranked high in the [NTEP](#) trials for: Turf quality, color, texture, disease resistance and lower mowing tolerance. *Sure Shot* makes an ideal choice for golf course tees, fairways and roughs. Simply adjust your mowing height to fit your selected application. *Sure Shot* offers excellent playability for sports fields of all types with a dense upright growing habit. *Sure Shot* may also be used for sod production, home and commercial lawns, parks or any application where the diversity of these exciting new bluegrasses can be utilized.

This Certified Interagency Blue Tag and Gold Sod Quality Tag is your guarantee of variety and superior quality

General Seeding Guidelines

A. SEED TIMING

- a. Seed from April 15 to June 15 or
- b. August 10 to October 15
- c. Dormant seeding after November 15 will germinate the following Spring

B. SITE PREPARATION

- a. Conduct soil test to determine soil additives needed
- b. Ensure soil pH is between 6.0 and 7.0
- c. Eliminate existing vegetation
 - i. Spray with non-selective herbicide
 - ii. Remove dead vegetation through mechanical means
- d. Add recommended soil amendments, pH adjustment materials, and fertilizer
- e. Till soil to a 4-6 inch depth
- f. Remove rocks and debris larger than one inch diameter
- g. Pulverize and lightly roll soil
- h. Apply 1 lb phosphorous (P) (2.27 lbs P₂O₅) / 1000 ft² to soil surface

C. SEEDING METHOD

- a. Seeding method is based on slope and soil at site
- b. Broadcast-, drop-, slit-, or drill-seed flat areas where erosion is not a concern
 - i. Seed should be planted 0.125 to 0.25 inches below soil surface
 - ii. Plant two directions putting ½ of seed down each direction
 - iii. Gently roll or rake seeded area to ensure good soil-to-seed contact
- c. Hydro-seed steep slopes where erosion is a concern
 - i. When hydro-seeding, broadcast ½ of the seed before hydro-seed mixture is applied and place ½ of the seed in hydro-seed mixture

D. WATERING REQUIREMENTS

- a. Water to field capacity immediately after seeding
 - b. The first three weeks after seeding, keep top 1.5 inches of soil moist*
 - c. Weeks four through six after seeding, water 3-4 times per week
 - d. After six weeks water when grass begins to show draught stress
- *Number of times to water per day depends on temperature, humidity, wind, and rainfall

E. FERTILIZING & MOWING

- a. Fertilize seeded area with 0.5 lbs nitrogen (N) / 1000 ft² 1, 2, and 3 months after initial seeding, then begin a regular fertilizer schedule
- b. Mow when grass is one inch longer than desired grass height but do not remove more than 1/3 of grass blade (i.e. mow when grass is 4 inches tall if desired height is 3 inches)
